

Imricor Medical Systems to Exhibit at Heart Rhythm Society Conference

Minneapolis, MN, May 4, 2011. Imricor will exhibit at the annual Heart Rhythm Society (HRS) meeting in San Francisco, May 5th through 7th. The HRS meeting is the premier global meeting for electrophysiologists, cardiologists who specialize in the treatment of rapid heart rhythms.

“We are extremely pleased to demonstrate our products for the first time at the Heart Rhythm Society, said CEO and president Steve Wedan. “We have had a very favorable response by leading physicians to our products, and now we are looking forward to engaging a wider audience of physicians on the benefits of the Vision MR™ ablation catheter and Horizon MR™ EP Recording System.”

About Imricor

Imricor’s products are designed to allow electrophysiologists to perform catheter ablation procedures in the magnetic resonance imaging (or MRI) lab. Currently, all heart rhythm treatments are performed in the fluoroscopy or X-ray lab, which exposes patients and physicians alike to radiation.
